Subject: Defibrillator Quotation QJS00276
Attachments: Project-Quotation-Purchase.pdf

Dear Michael Walton

Thank you for taking the time to talk to us about your project and goals. Attached is a quotation that covers the most suitable equipment and facilities proposed by Community Heartbeat to achieve this.

[Community Defib and Cabinet Information](#)

Equipment Details

For a better overview of the equipment quoted you can use the link below to read a summary of each defib, cabinet and emergency phone. If you are unsure simply match the picture and name in your quote to the picture on the link.

[Defibrillators, Cabinets & Emergency Phones](#)

On-going Costs

Annual Support if quoted is a one-off fixed cost per year that covers all defib batteries, pads and rescue kits including the postage on these items and an Annual Check which you can request us to carry out anytime once per year. A link is provided below for an overview under the Annual Support Section.

Installing A Defibrillator

We do recommend if you have a local electrician to approach them as Community Heartbeat will provide guidance and installation instructions. This may be more cost effective due to mileage, but if you would like us to install and have been quoted as such, the cost is £275 per installation. If we install we will bring the equipment with us on the day (which we would confirm in advance) and fit the cabinet, make ready the defib and complete the first stage of the registration process with the electricians. Currently, our installers do not cover Scotland.

Of course, if you are only having a defibrillator (which is powered by a non-rechargeable battery) then you do not need an electrician, as this requirement only applies to defibrillator cabinets where power is present and needed, any post mounted non powered cabinets will not need an electrician to fit them, but will need a specific combination (Sentry and Zoll AED 3 with thermal bag) of equipment to facilitate properly.

Annual Support

[Support Agreement Information](#)

An annual support can be taken out at any time, so if you wanted to monitor the usage of your defibrillator once installed and take out a support later then you are most welcome to do so.

Alternatively, you can simply order parts as and when required. Remember an Annual Support is not required for us to support you, it simply covers the running costs of the defibrillator.

Community Training

We shy away from using the term “training” and refer to our sessions as “Awareness Sessions”. The key component for us is removing any fear in the community of attempting a rescue. For further details about our sessions please use the link below

[Awareness Session Overview](#)

Governance

We will help you and the community look after your defibrillator as your backend support team for its lifetime. Any issues or uncertainty we will be at the other end of the phone or get back to you by e-mail as soon as possible. We help guide you on how to maintain, check and report on your defibrillator and track all issues.

As part of this service we also provide access to a fully qualified counsellor should anyone want to talk privately about their experience in a rescue situation as part of the project. Community Heartbeat fund the first hour and simply provide a point of contact, we do not record any private details.

Read more about the system we use to support your defibrillator project long term here:

Next Steps

If you are looking **to begin fundraising** you can request free support and help using the online form linked here : [Request Fundraising Materials](#)

Have a **phone box that you need help adopting?** We can support you with this, simply request an adoption here : [Start Adoption Of Phone Box](#)

For further reading about setting up members of your local community as an **emergency volunteer group (V.E.T.S)** you can view the handbook here: [V.E.T.S Handbook](#)

If of interest you can e-mail v.e.t.s@communityheartbeat.org.uk to learn more.

Need more time to consider? For **further reading and research** we will also link to our Project Guide that covers many aspects of providing medical equipment into a community.
